Description:-

This database system is designed to store, manage, query, and retrieve pharmacy-related data. It caters to the needs of managing various aspects of a pharmacy, such as inventory, sales, and customer records. The system is intended to allow efficient management of pharmacy operations. It is a comprehensive solution for organizing and handling the diverse data requirements within a pharmacy setting, contributing to streamlined and effective management of pharmaceutical activities.

Features:-

This database system provide various features like:-

- User Authentication: Verify identity of employees and admin.
- Purchase Management: Record purchases from companies
- Sales Management: Record sale transactions to customers
- Payment reports: Give detailed payment reports for purchases, sales, profits etc.
- Inventory Handling: Track stock levels and expiry dates.
